

## Load – Prior Bond Issue

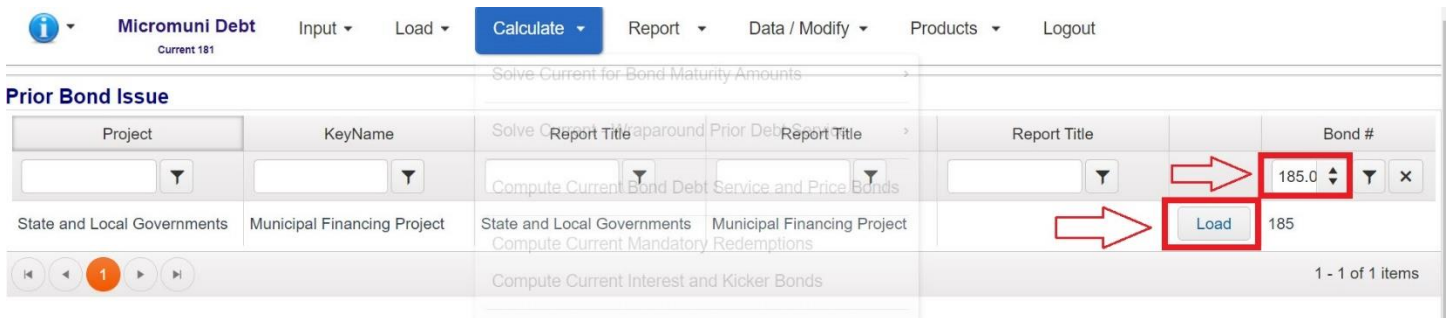

Micromuni Debt is a menu driven system that has the capability of handling two sets of bond issue cash flows. Each bond issue contains a complete set of information about a bond issue, such as the dated date, delivery date, first and last maturity dates, and all the cash flows that represent the debt service principal and interest repayments. The two bond issues are referred to as the "Current" and "Prior" issues.

The following screen will list all the available bond issue to load.

Micromuni Debt will list all the bond issues available. You can sort them by any column as well as filter the list by entering text or numeric values into the text boxes.

We entered bond issue # 185 in the filter box to find this bond issue, and then we clicked the Load button.

After loading the Prior Bond Issue, Micromuni Debt will display the bond summary information of the current and prior bond issues. Micromuni Debt also displays the Unique ID of the bond issue and displays this information in the upper left corner under "Micromuni Debt".

NOTE \_\_\_\_\_

The "Micromuni Debt" button does not apply to the prior bond issue.

The "Micromuni Debt" button only computes bond interest for the current bond issue.
